CSA GLOBAL AWARDED FOR ITS CONTINUING EXPORT SUCCESS

CSA Global was recently honoured on its global merits, winning the highly respected Craig Senger Excellence in Export Award at the Austmine Industry Leaders' Dinner and Awards.

The award acknowledges the company's achievements in expanding its international presence and diversifying its range of solutions across mining, geological, technology and management services.

Managing Director, Jeff Elliott said winning the award recognises the company's success in increasing its services globally, but more importantly, it also demonstrates the dynamic work by CSA Global's teams.

"This is a testament to our teams that work so effortlessly around the globe and understand our core values, which has effectively contributed to the company reaching its goals. The commitment of our management and the enthusiasm of our talented staff across the globe should be applauded," he said.

CSA Global has been pivotal in the assessment and discovery of mineral deposits across the globe and has assisted companies with their exploration, data management,

resource evaluation, mining operations and corporate strategies.

With improved commodity prices and investment confidence in the mining industry over the last two years, CSA Global's export earnings have grown approximately 37%.

The company has experienced further growth with substantial improvements across most regional markets, particularly in Canada, Europe, Central Asia and Africa.

An example of CSA Global's international activity is best demonstrated in a recent project where CSA Global Perth was asked to complete due diligence on some advanced base metals projects in Canada's mineral-rich Yukon province.

The consulting firm used personnel from its Perth and Vancouver offices to complete the desk-top and in-field components of the due diligence.

The UK-based client went ahead with the deal and have since gone on to make a significant investment to drill out several deposits to allow estimation of Mineral Resources and Ore Reserves.

CSA Global's ability to coordinate personnel globally, their relevant technical expertise and expert

knowledge in reporting in accordance with the JORC Code and to the requirements of Canada's National Instrument 43-101 were key factors in being retained as independent mining consultants during the evaluation and planning phases.

Mr Elliott said this particular project was an excellent example of how CSA Global efficiently delivers positive results by integrating capability from across its global offices.

With many successful projects like this in its portfolio, it does not come as a shock that CSA Global continues to look for new business opportunities both globally and locally in all sectors of the mining industry.

"We aim to make a difference in the global mining industry, and we continue to uncover innovative solutions that help our clients over the entire mine value chain in Australia, in Canada, and across the world."

"By expanding our offices to several countries around the world we can deliver quality service with the specialist talent that we possess both locally and internationally," he concluded.
